A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

- 1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - A person shall be entitled to a patent unless -
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Pilozzi et al. (WO 01/58173 A2). US application 09/498,328 of which this patent claims its priority date has been allowed and is at publications awaiting publication.
- (1) With regard to claim 1, Pilozzi et al. discloses in Fig. 3, a method of correcting for a phase offset between a subscriber and a service provider, comprising: sending a training signal from the subscriber to the service provider, the service provider being synchronized to a network clock, receiving the training signal at the service provider, calculating the phase offset between the subscriber and the service provider based upon the received training signal, retransmitting the calculated phase offset from the service provider to the subscriber, and pre-adjusting a new signal transmitted from the subscriber to the service provider based upon the transmitted phase offset (pg. 4, lines 2-24).
- (2) With regard to claim 9, claim 9 inherits all limitations of claim 1. Furthermore, Pilozzi et al. also discloses transmitting the pre-adjusted new signal such that the new signal is in phase with the network clock when the new signal is received at the service provider (abstract).

Application/Control Number: 09/636,455

Art Unit: 2634

(3) With regard to claim 10, Pilozzi et al. also discloses wherein the pre-adjusting step further includes adjusting the phase of a clock signal in the subscriber by the transmitted phase offset (pg. 12, lines 13-15).

(4) With regard to claim 11, claim 11 inherits all limitations of claim above.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 2, 5, 7, 8, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pilozzi et al. (WO 01/58173 A2) as applied to claims 1 and 11 above, in view of Pilozzi et al. (US Patent 6, 456,651 B1).
- (1) With regard to claim 2, as noted above, Pilozzi et al. discloses in WO 01/58173 A2) discloses all limitations of claim 1. He does not however disclose wherein the calculating step further comprises modulating the received training signal by a cosine function to generate a signal Rx and modulating the received training signal by a sine function to generate a signal Ry.

However, Pilozzi et al. does disclose in US Patent 6,456,651 B1 in Fig. 6, wherein the calculating step further comprises modulating the received training signal by a cosine function to

Application/Control Number: 09/636,455

Art Unit: 2634

generate a signal Rx and modulating the received training signal by a sine function to generate a signal Ry.

One skilled in the art would have clearly recognized that transmitting comprises modulating the received training signal by a cosine function to generate a signal Rx and modulating the received training signal by a sine function to generate a signal Ry is a wellknown technique introduced in many references. Therefore it would have been obvious to one of ordinary skill in the art at the time of invention to incorporate the methods as taught in both patents as a method of adjusting the sampling phase and optimization of the system for channel interference and noise (col. 2, lines 21-26).

- (2) With regard to claim 5, claim 5 inherits all limitations of claim 2, above. Furthermore, Pilozzi et al. also disclose in US Patent 6,456,651 B1 in Fig. 6, determining the phase offset, Δt, as a function of the arctangent (Rx/Ry).
- (3) With regard to claim 7, Pilozzi et al. also disclose in US Patent 6,456,651 B1, transmitting the calculated phase offset further includes transmitting a calculated time delay at the service provider side, t_0 (col. 8, lines 26-44).
- (4) With regard to claim 8, claim 8 inherits all limitations of claim 7. Furthermore Pilozzi et al. also discloses in US Patent 6, 456,651 B1, pre-adjusting the new signal transmitted from the subscriber to the service provider based upon the transmitted phase offset and the transmitted time delay at the service provider (abstract).
 - (5) With regard to claim 13, claim 13 inherits all limitations of claims 1, 2 and 11 above.

Art Unit: 2634

Allowable Subject Matter

5. Claims 3, 4, 6, 12, 14-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lawrence B Williams whose telephone number is 703-305-6969. The examiner can normally be reached on Monday-Friday (8:00-5:00) being out of the office every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306 for regular communications and 703-872-9306 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4750.

Lawrence B. Williams
